

 Protecting the grid

Cybersecurity services for energy IT & OT environments

Viasat Security Operation Center (SOC) is designed to provide real-time threat detection, network visualization and timely mitigating response using our advanced intrusion detection & prevention tools. Our SOC illuminates a complex cyber-physical ecosystems, detecting analyzing, and responding to threats and vulnerabilities to safeguard the integrity of industrial technologies in both IT & OT environments.

1 Detection

2 Analysis & mitigation

3 24/7 Monitoring capabilities

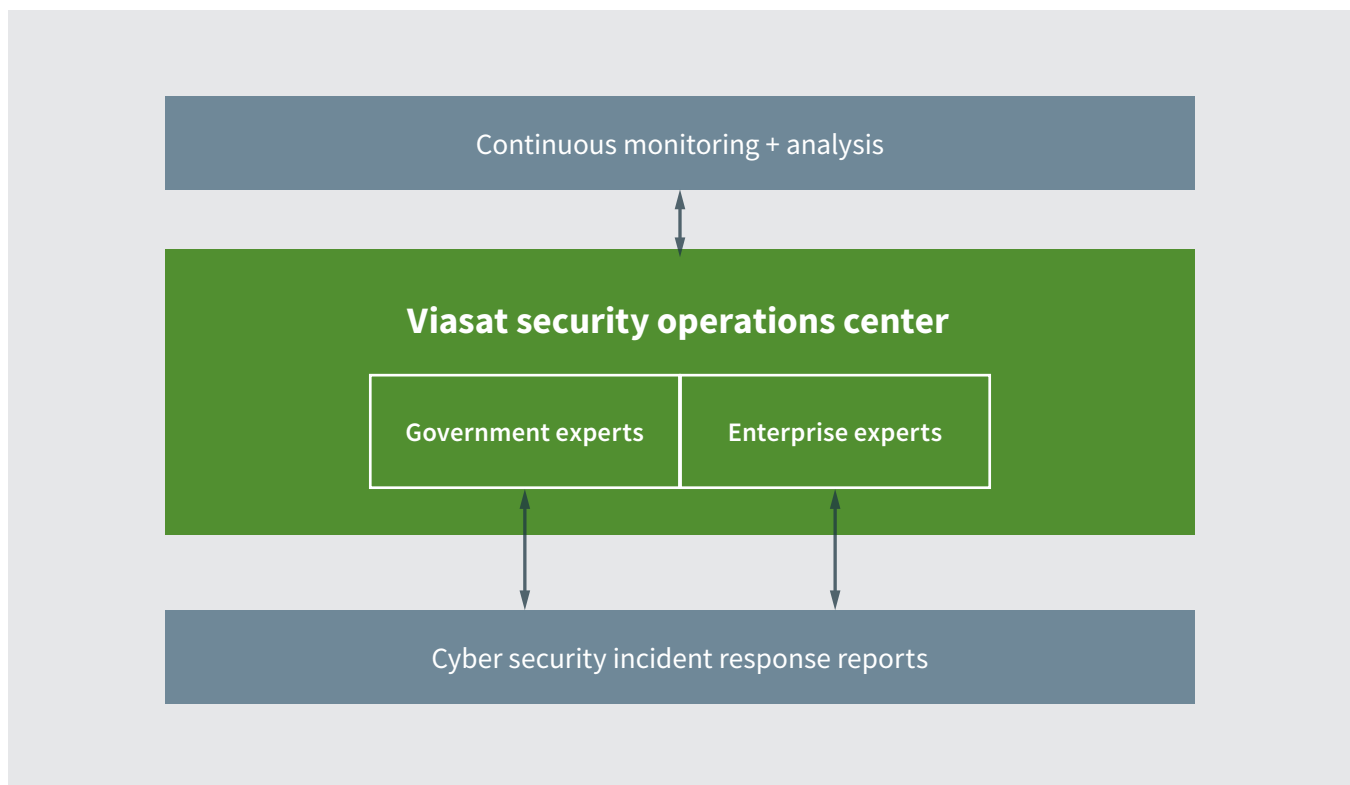

Viasat 

🎧 Security management

The quicker a threat is identified, the less harm it can do. That's why around-the-clock monitoring and deeper analysis of suspicious activity is critical to keeping your network safe. Our highly-cleared and certified experts leverage the latest technologies and techniques to seamlessly report issues and provide fix actions to prevent & stop attacks before they become a problem.

Security Management Services

- » 24/7 monitoring capability, round the clock incident recording/tracking
- » Preventing, detecting, analyzing, and responding to cybersecurity incidents
- » Top of the line AI deep learning of the network
- » Incident response with easy-to-understand fix actions
- » Customizable reports and metrics to support various levels of stakeholders
- » IT/OT security monitoring
